Continuation of 11. does NOT place the application in condition for allowance because: The claims stand as rejected in the final rejection. Applicant's attempt to clarify the original drawings through the use of arrows within the remarks is not persuasive, as the arrow denoting what is purported to be a raised area on the second side of the spring is appears to be directed at element 40, not at any part of the spring 38. Applicant has conceded the original drawings are improper. Repeated reviews of the drawings as originally show no evidence of a second raised portion on a side opposite the first raised portion within the drawings as originally filed.

Applicant recites a definition for a belleville spring and washer, and the makes the unsupported conclusory statement "each of which utilize the term washer which is synonymous with planar" (4/15/08 remarks, page 11). The examiner disagrees with the contention that a washer is synonymous with planar, particularly in view of applicants supplied definitions which clearly recite that a belleville spring is a "conical shaped washer" and that a belleville washer is a "cupped spring washer", both of which like in three planes, and therefore, neither of which are planar.

Applicant's arguments regarding Baninger are not persuasive. First, claim 8 recites no limitations related to a spring of any kind. The claims are not in condition for allowance as Baninger discloses all of the elements recited within the claim. Further, applicant's amendments do not limit the scope of the claims to a single spring, there is no recitation within the claims prohibiting the claim from reading as a plurality of spring elements functioning together as a single spring.
